# FLOW METERS AND TEST KITS

## FLOW METERS & TEST KITS

**FLOW METER** - Direct reading flow meters tell you quickly and accurately what flow in GPM you have. Now you will know what your pump or tractor hydraulic system is giving you-now you will know what flow of oil you are delivering to a motor or a cylinder. Aluminum. 3000 PSI.

Use in any position-mobile or stationary-as a permanent installation or as a serviceman's tool.

A moving indicator on the meter gives a direct reading.

## GAUGE SNUBBER

**PROTECTS GAUGES AND OTHER DELICATE INSTRUMENTS FROM SHOCK PRESSURE SURGES AND PULSATIONS**

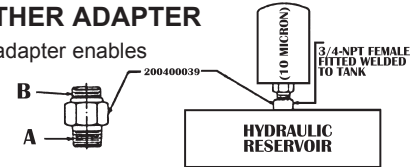

Maximum Operating Pressure for Series GF valves is 3000 PSI. Manatrol Pressure Snubbers give maximum protection to your gauges. They provide rapid, smooth response by eliminating pressure surges and pulsations. This is achieved by passing the flow through the space between the steel body and the root of the core male truncated threads, subjecting the flow to high resistance, smoothing out all surges and pulsations.

# PIONEER QUICK-ADAPT ADAPTER SELECTION CHART

Standard Package 5 \* Package of 1

In order to select your Pioneer adapter:

1. Follow down the vertical column on the left until you find the male tip on your implement line.
2. Proceed horizontally along this row of adapters until it intersects with the column under the female body on the back of your tractor.

For example: The proper adapter to hook up an implement with an old style JI Case male tip to a Pioneer style female body would be Pioneer Adapter 4085-4.

\*SAE specifications allow a tolerance of plus or minus 1/32" on the OD of the hose. Therefore, it may be necessary to have two sets of dies swage the coupling through the larger die first. If a gap exists between hose & ferrule of the coupling then swage coupling through the smaller die. +Both dies must be used on these sizes.
