TIMKEN/FAFNIR MEDIUM DUTY SERIES BEARINGS WITH SET SCREW LOCK

The TimKen/Fafnir YASM, YCJM and YCJTM medium-duty pillow blocks feature TimKen/Fafnir's GYM-KRRB bearing inserts. These pillow blocks are ideal for conveyor, fan and blower, sawmill, and feed and grain handling applications. TimKen/Fafnir's industrial-duty pillow blocks incorporate premium features designed to extend bearing life and will replace competitive designs. Interchange with Dodge SCM; Seal Master MP, MSF and MSFT series.

TimKen Replacement Bearing For Assemblies Pictured Above-

The TimKen/Fafnir GYM-KRRB series is designed to offer extended bearing life, even in the most demanding industrial environments. This insert features a full width inner ring which provides extra support along the shaft. This extra support feature, coupled with a flexible nylon retainer, allows the GYM-KRRB inserts to operate for extended periods with undersized shafts or misalignment conditions. TimKen/Fafnir's GYM-KRRB series inserts are equipped with a three-piece seal which protects against corrosion, contamination and fiber wrap. These inserts also include nylon patch setscrews which prevent setscrew back-out and provide superior holding power, even in applications with severe vibration.

BUNTING BEARING C95400 ALUMINUM BRONZE 13 INCH LENGTH

Comparable Alloy Specifications: C95400
Common Continuous Cast Manufacturing
 Specifications: ASTM B505; QQ-C-390B, Type III

Nominal Stock Allowances:
 O.D. up to 2.25" .060" I.D. and O.D.
 O.D. 2.25" to 3.25" .080" I.D. and O.D.
 O.D. 3.25" to 6.00" .100 I.D. and O.D.
 O.D. 6.25" to 8.00" .125" I.D. and O.D.

Chemical Composition:
 Aluminum 10.0 - 11.5%
 Iron 3.0 - 5.0%
 Copper 83.0% Min.

BUNTING C95400 CONTINUOUS CAST AND CENTRIFUGAL CAST ALUMINUM BRONZE BARS

Bunting Bearing continuous cast aluminum bronze bars are available from stock in C95400 bronze in standard 13" length solid & cored bars.

Aluminum bronze is very hard, very strong, abrasion resistant bronze whose physical properties remain good at elevated temperatures - compressive strength at 500 degrees F is the same as that of tin. Good applications are heavy earth moving equipment, roll neck bearings, & machine tool bearings. Centrifugal cast large diameter cored bars are available as standard stock items in 13" lengths.

 Zinc 2.0 - 4.0%

BUNTING C93200 CONTINUOUS CAST and CENTRIFUGAL CAST BRONZE BARS

Bunting continuous cast bronze bars of C93200 (SAE 660) bronze give superior quality and performance. Continuous casting achieves a high density grain structure, free of porosity, resulting in a reduction of tool wear and component rejects.

Cored and solid bars are stocked in 13" lengths.

Nominal Stock Allowances:

O.D. up to 4" 1/32" I.D. and O.D.
 O.D. 4" to 5" 1/16" I.D. and O.D.
 O.D. 5" + 3/32" I.D. and O.D.

Nominal Stock Allowances:

PLANE BEARINGS

RULON LR BEARINGS

BUNTING RULON BEARINGS

RULON LR bearings are a filled PTFE machined to close tolerances providing low coefficient of friction, good temperature range, no water absorption, and a wide range of standard sizes. RULON bearings have excellent wear resistance qualities, and there is no need for lubrication. RULON bearings perform reliably and efficiently under conditions of extreme temperatures, corrosion, where friction and wear are a problem, and other hard-to-solve applications. RULON LR bearings operate at PV values up to approximately 10,000 dry. Ideal for rotary and linear bearings, eliminates the need for lubrication in almost any environment. Temperature range: -400° F/ +550° F

PLANE BEARINGS

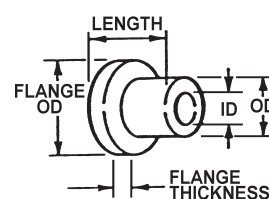

NYLON BEARINGS

BUNTING NYLON BEARINGS

NYLON - Molded Nylon 101 sleeve, flange, and thrust bearings provide an economical alternative where performance characteristics and the strength of metal bearings are not required. Bunting Bearing carries a full line of sleeve, flange, and thrust styles to accommodate shafts up to 1" diameter. Temperature range: -20° F/ +250° F

FLANGE BEARINGS

SPRING STEEL TENSION BUSHINGS

Tension Bushing Part Numbers in 16ths; for example are: SS08-1208; 08 = 8/16 or 1/2; 12 = 12/16 or 3/4; 08 = 8/16 or 1/2.

Made of Spring Steel with oil finish Hardened to Rockwell 45 and Tempered. Looks like a short-large Roll Pin. Allowable Hole Tolerance +.004 to -.005. Can be cut with an abrasive cut off wheel.

Tension Bushings are hollow cylinders slit longitudinally over their entire length to permit compression and expansion, and beveled to facilitate insertion. They are rolled from special spring steel of high elasticity, resilience and wear resistance.

Tension Bushings are designed to replace solid steel (tubular) and case hardened bushings because they are self retaining, hardened throughout and reusable. Their inherent elastic qualities allow them to remain tight even if wear should cause housings to become enlarged. Removal and reinsertion can be easily accomplished with a hammer and a drift.

Tension Bushings are particularly suitable for use as low speed, high pressure bearings and for applications involving oscillating motion.

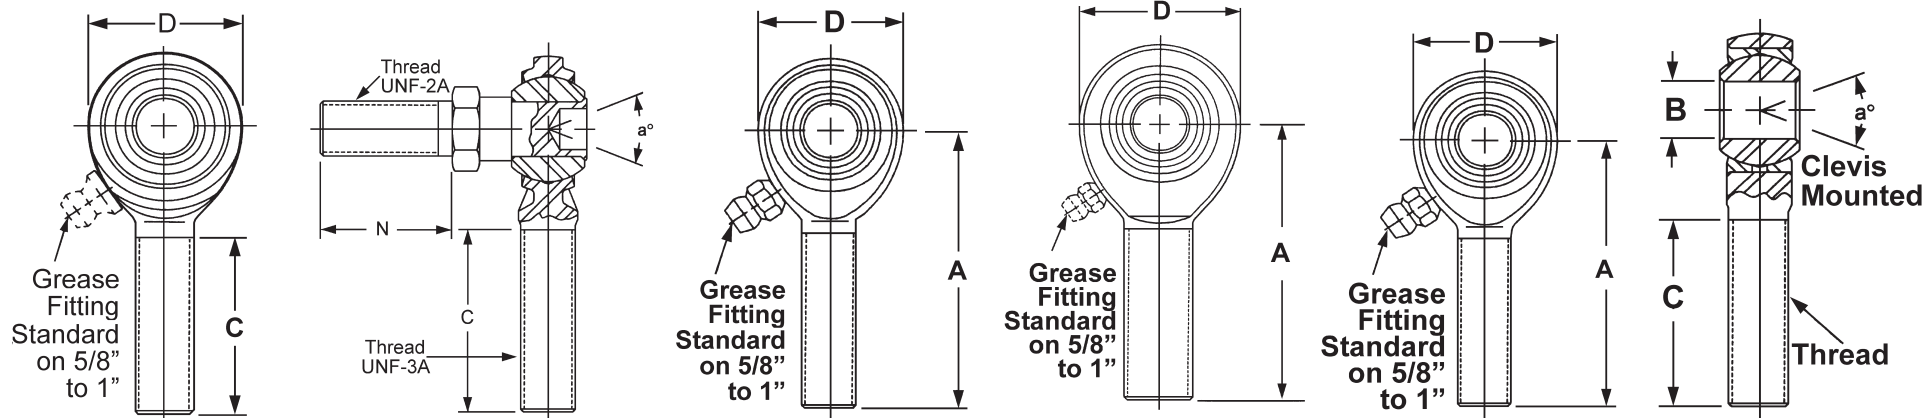

USE-Where a pin or shaft has worn a hole oval or out of round or oversize, bore out to the next largest size and insert a Tension Bushing.

Generic is fractional I.D. x O.D. Family is fractional I.D.
Hole size can be: Min.-Max. -.0015 Oversize can be used as SPACERS

NOTE: All Aetna AG numbers with suffix S have heavy duty L seal inside the housing. *For 1/2" bore use ISB-B shown below.

IDLER HUB

For a quick idler application:
Pick the appropriate Sprocket or Pulley,
then pick the corresponding Idler Hub.

EXAMPLES:

IHW fits all "W" Sprockets & Pulleys
IHX fits all "X" Sprockets & Pulleys

BEARINGS for IS SPROCKETS ONLY

Aetna sprockets with 5/8" bore can
be changed to 1/2" bore with one
